# **JET SPINDLE PROCESS REVIEW**

## **#1 PREREQUISITES**

√ High pressure coolant available
Min 15 BAR with 12 L/Min flow rate

√ Small diameter cutting tools used Max Ø 4mm, Shank Max Ø 6mm

### **#2 LIMITATIONS**

√ Finishing and semi-finishing operations

Drilling, engraving, chamfering, slot, profile and shoulder milling

√ Minimum operating Jet Spindle RPM

10% less than Jet Spindle RPMs at Idle speed

#### **#3 CHECKLIST**

- 1. Ensure minimum tool holder overhang.
- 2. Check Z-axis limitations.
- 3. Ensure water-based emulsion or cutting oil, viscosity up to 20 [Cp].
- 4. Minimum coolant filtration level: 100 microns.
- 5. With emulsion coolant, use an anti-foaming additive suitable for emulsion to prevent foaming.

#### **#4 FIRST RUN**

- $\sqrt{}$  Review recommended Cutting conditions table for Jet unit.
- $\sqrt{100}$  Insert 10% rule target conditions Ae, Ap, Feed into the program.
- $\sqrt{}$  Start with 30% of F ( Table Feed ) , review Speed Display values.
- √ Increase till you reach 100% target values.
- $\sqrt{\phantom{1}}$  Complete the attached form and send it over for technical assistance.

#### **#5 COMPLETE FORM**

The form on the back of this page can be filled in using Adobe Acrobat, as follows:

- 1. Download this PDF file and open it in Adobe Acrobat.
- 2. Insert images in the area marketed IMAGES.
- 3. Cells marked "Scroll to Select" use the arrows on the right to scroll and click on selection.
- 4. Fill in all parameters for the Original Machine Spindles.
- 5. Leave open HSM Jet Spindle and Comments for our Technical Support Team.
- 6. Go to File > Save As.. or use CRTL + SHIFT + S and save the form on your device.
- 7. Email the saved form to your Jet Spindle Account Manager.
- 8. Our Technical Support Team will review the details and test data and reply with Options.
